Q: Describe the last accessed date and location of the users who received the outliers badge.

Hint: Outliers is the name of the badge.

1 GEN (cheap LLM) 3.3 s, cost 2.43

```
SELECT users.LastAccessDate, users.Location
FROM users JOIN badges ON badges.UserId = users.Id
WHERE badges.Name = 'Outliers'
```

2 DB evidence (priced, read-only) 54 ms, no LLM

PARSE/BIND ✓ EXEC: 0 rows ✗

VALUE PROBE: `'Outliers'` does not occur in `badges.Name`

nearest stored value: `'outliers'`

3 PLAN flagged state: the cheapest action with value is **VALUE FIX (DB-only rewrite, no LLM call)**

4 EXEC + ACCEPT +11 ms

```
WHERE badges.Name = 'outliers'
```
✓

```
1 row: ('2014-09-12 17:06', 'Leuven, Belgium')
```

PlanGate total: 1 LLM call, cost 2.50, 3.4 s, correct.

LLM-only alternatives for the same query (all keep 'Outliers'):

✗	resample (cheap LLM)	cost +2.43
✗	repair without DB evidence	cost +2.47
✗	switch to deepseek-v4-pro	cost +7.87
✗	switch to qwen3.8-max	cost +8.08
